Publication Policy

Information, statements, or findings published
are the views of its author/ source only.

Manuscripts

Please E-mail to editorbionotes@gmail.com

Guidelines for Authors

BIONOTE publishes short notes on any aspect
of biology. Usually, submissions are reviewed
by one or two reviewers.

Kindly submit a manuscript after studying the
format used in this journal
(<http://www.entosocindia.org/>).

The editor reserves the right to reject articles
that do not adhere to our format. Please provide
a contact telephone number. Authors will be
provided with a pdf file of their publication.

INTRODUCTION

The species *Campylotes splendida* Elwes, 1890 was described from the Naga Hills. In the original description, Elwes (1890) noted that Charles Oberthur informed him that a similar moth occurred in Yunnan, China. The size of this species is much greater than that of other *Campylotes* species known from India (Hampson, 1892).

RESULT AND DISCUSSION

The current record is from an opportunistic survey conducted at Vijaynagar, Changlang district of Arunachal Pradesh on September 21, 2023. The authors observed two individuals of the species and photographed them while the moths were basking in the sun. The habitat, where the individuals were sighted consists of riparian fringing habitat located

at coordinates 27°11'26"N and 96°59'37"E.

This is a new record for Arunachal Pradesh and extends the known distribution of the species northwards.

ACKNOWLEDGEMENT

The authors are very thankful to Minom Pertin for his help to conduct the survey in the study area.
