Farmers perception on Fall armyworm, *Spodoptera frugiperda* in India

(Entomological Society of India, New Delhi-110012)

Biological invasion is a serious threat to the ecology, biodiversity, and the security of human livelihoods. Fall Armyworm (FAW), *Spodoptera frugiperda* (J.E. Smith) (Lepidoptera: Noctuidae), invaded India during 2018 and devastated the Maize and other cereal crops. FAW's invasion in Asia is a great concern given that the region contributes approximately 30% of global maize supplies, which are now at risk.

Smallholder farmers are especially vulnerable, having limited access to the tools, technologies, and management practices that are necessary to sustainably manage the pest. The outcomes of the present survey helps in knowing the current status of FAW invasion in the country, which will be useful in raising public awareness about FAW and implementing appropriate Integrated Pest Management (IPM) measures.
